

Building a Logic Model for Programs Targeting Young Vulnerable Children and Their Caregivers

Problem statement: There are many children in the community under the age of 8 who have lost their biological parents and are living without appropriate care by a consistent caregiver. As a result these children often lack the support they need to access critical services. Caregivers report a high level of stress due to lack of resources and other forms of support. Because of these factors children are at risk of not reaching their developmental potential.
