Building a Logic Model for Programs Targeting Young Vulnerable Children and Their Caregivers

Problem statement: There are many children in the community under the age of 8 who have lost their biological parents and are living without appropriate care by a consistent caregiver. As a result these children often lack the support they need to access critical services. Caregivers report a high level of stress due to lack of resources and other forms of support. Because of these factors children are at risk of not reaching their developmental potential.

Program Level INPUT ACTIVITY Train program staff on Knowledge of ECD children's needs Identify human & the importance resources for program of caregiver/child outreach, including attachment volunteers & other community workers Financial & Map available services human resources in the community Establish comprehensive for program referral system to ensure outreach, children & caregivers targeting the most receive necessary vulnerable young support children Volunteers & others make home visits & Equipment & provide support to caregivers transportation Register all children so that they may access public services
